

Can YOUR mouse retrieve?

Introducing the most versatile,
and cost-effective
film scanning and retrieval
tool available...

The Eye Com ImageMouse® *Film Retrieval System*

ImageMouse® is the Seamless Bridge Between Microfiche and Your Desktop PC. The ImageMouse® allows you to view microfiche pages, live, in real time, eliminating the need to scan film first before viewing, printing or distributing images. View images instantly as the mouse glides across the microfiche, over the compact, lighted tablet. Simply click a key to enhance, store, forward, fax, insert in word processor documents, or e-mail your images. The ImageMouse® System includes software that is easy to use and compatible with all Windows® programs (i.e. Microsoft Word®) and fax programs.

Point-and-Click Viewing and Storing

With the PC link, the ImageMouse® allows you to view microfiche, jackets and aperture cards in both comic and cine modes. The ImageMouse® Film Scanning System is available in two magnification ranges to accept a variety of film formats. The 42/48X model accommodates 42X or 48X COM microfiche, filmed checks, etc., while the 24/28X model meets the needs of most other source

document applications. Furthermore, you can order an additional ImageMouse® capture unit to allow you the flexibility to view multiple image sizes.

Replaces Your Reader/Printer

This fun and innovative alternative to expensive stand-alone units can perform all of the same functions as readers, reader/printers and expensive film scanners, utilizing the computers and laser printers that you already have (if amply equipped). We can also configure an Eye Com computer system, optimized for performance with the ImageMouse®.

- Small size fits any workspace
- Choice of viewing as negative or positive images
- Symmetrical design for right or left-hand use
- Purchased with an Eye Com Computer System, you get the functionality of a reader/printer, a film scanner and a powerful business computer that can run other software as well.
